EDUCATION

The University of Hong Kong	Sep 2021 - Jun 2023
<i>Master of Science in Business Analytics (GPA: 3.7/4.3, HKU Merit Scholarship)</i>	
Beijing Normal University	Sep 2016 - Jul 2020
<i>Bachelor of Computer Science (Double Degree in English) (GPA:89/100 GPA:90/100)</i>	

WORK EXPERIENCE

FWD Insurance (Hong Kong)	Senior officer (Actuarial GenAI) - Group Digital	Nov 2024 – Present
Provide end-to-end AI solutions and rapid POC prototyping for actuarial and finance team, assisting enterprise AI transformation.		

- Financial Report Generation AI Automation**
 - Product design & architecture:** Designed a scalable automation pattern for enterprise financial reporting (starting with embedded value reports). Decomposed complex reports into reusable templates + variables, enabling faster generation, clearer audit trails, and seamless rollout across business units and reporting periods.
 - Full-stack development:** Engineered and deployed a 100% vite-coded TypeScript web application featuring file ingestion, variable computation, template population, and editable report previews. Integrated with enterprise finance portal on AWS.
 - Impact:** Reduced report preparation and audit cycles from several months to a few weeks. Enhanced compliance and review efficiency by providing transparent audit trails with direct source linking and formula evidence.
- Experience Study Automation with AI + ML pipeline**
 - AI agent reasoning:** Designed a reasoning system to automate persistence experience analysis and best-estimate assumption proposals. The agent ingests experience data and synthesizes insights from data patterns, heuristic rules, and business logic, systematically setting assumptions and flagging products that require actuarial review.
 - Machine learning analysis:** Leveraged xgboost and logistic regression to identify key drivers of policyholder persistence.
 - Report generation:** Orchestrated an automated reporting pipeline that consolidates AI reasoning outputs and ML feature importance results into a comprehensive, audit-ready experience study report.

Zurich Insurance (Hong Kong)	Junior Data Scientist	Mar 2023 – Nov 2024
-------------------------------------	------------------------------	----------------------------

- Data Analysis and Dashboard Reporting**

Drove data-informed business strategies by analyzing multi-faceted customer and product data (demographic, transactional, behavioral); Developed a company-wide Power BI dashboard for real-time performance monitoring, enabling leadership to make swift, data-driven decisions.
- Machine Learning and AI Automation**
 - Automated Bank Slip Verification (OCR): Fine-tuned Azure Document Intelligence models and deployed them as a scalable API (Azure Functions), reducing manual processing effort by 67% for the finance team.
 - Enhanced Marketing Efficiency: Applied xgboost modelling to help distribution team identify high-value customers for cross-selling campaigns, directly increasing conversion rates.

SKILLSET & EXPERIENCE

- end-to-end AI solution design & implementation - product & UI design, webapp development, aws deployment
- fast prototype POC iteration, hitting customer pain points
- tool use experience: Python, SQL, Typescript; Machine Learning; AWS, Azure; PowerBI, Tableau; Prompt Engineering, MCP, CLI, agentic framework
